

Organisms

Cells

Molecules

Use the NOVA RNAi video clip (1:52-3:20) to explore how traits are determined at the molecular level. What is the role of each of these molecules in determining the traits of an organism? *Describe the analogy used in the video for each of these molecules. Label the molecules in the diagram above.*

Where in the cell is the molecule located?	Molecule	Analogy
	DNA	
	RNA	
	Amino Acids	
	Proteins
