Lesson 2: How Common is this Problem? Could it Happen to Me?

Procedure: Connect, Extend, Question Thinking Routine

Connect: How are the ideas and information presented connected to what you already know (did it answer any prior questions?)	
Extend: What new ideas did you get that extended or broadened your thinking in new directions?	
Questions: What new questions arise after reading the new material?	

These materials were developed with funding through a grant from the Gordon and Betty Moore Foundation to Northwestern University and the University of Colorado Boulder.

1. Who gets MRSA?

2. Is there only one variation/strain of staph (is there only the MRSA variation)?

3. What is the history of resistance to different strains of bacteria?

4. How many cases like Addie's were there in the past?

5. What do community-associated resistance and hospital-acquired resistance mean?

Related Phenomena: What are some other experiences you've had where you think you might have picked up an illness from something else in the environment around you or places you are worried that you could pick up an infection or illness?

Making Sense: Record some questions you now have about all the phenomena you have investigated and been wondering about so far.

What ideas did you (and your class) come up with for what we could do in future lessons to investigate some of these questions?
